Release 0.0.2

Rob Cakebread

March 18, 2012

CONTENTS

twerp is a command-line utility for making phone calls, conference calls, and sending and receiving SMS text messages with Twilio's API. It is written in Python.

EXAMPLE USAGE

\$ twerp -N

List your Twilio phone numbers

\$ twerp -Nv

List lots of details about each of your Twilio numbers:

\$ twerp -m 'this is a test' -s +12135551212

Send SMS message to +12135551212

\$ twerp -d +12135551212 -u <http://computer.net/TwiML>

Call +12135551212 and execute the TWIML at given URL

\$ twerp -i -d +12135551212 -u <http://computer.net/TwiML>

Call +12135551212 and execute the TWIML at given URL, then go interactive command-line mode. You can then modify the call live with different verbs such as 'url <URL>' to re-route calls.

\$ twerp -d +12135551212,+13235551212 -u <http://twimlets.com/conference?Music=rock>

Call two numbers and put them in a conference room. First one gets rock music till another caller joins.

\$ twerp -l

List all of your SMS messages (Be careful if you have zillions, filtering coming soon)

\$ twerp -S nnnnnnnnnnnn

Show details of SMS message by SID
